the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million, from 2.5 million in 1980 to 4 million in 1999. The public sector has grown from 10% of the economy to 17% of the economy.

There is a growing emphasis on the need to improve the efficiency of the public sector. This has led to a number of initiatives, including the introduction of competition, the restructuring of public services, and the introduction of performance targets. The aim of these initiatives is to reduce the cost of public services and to improve the quality of the services provided.

One of the main challenges facing the public sector is the need to reduce the cost of public services. This is a difficult task, as public services are often provided at a loss. However, there are a number of ways in which the cost of public services can be reduced. These include the introduction of competition, the restructuring of public services, and the introduction of performance targets.

The introduction of competition is one of the most common ways in which the cost of public services can be reduced. This involves the introduction of private companies into the public sector. These companies are then able to compete with each other for contracts, which helps to reduce the cost of the services provided.

The restructuring of public services is another way in which the cost of public services can be reduced. This involves the merging of public services and the elimination of duplication. This helps to reduce the cost of the services provided and to improve the quality of the services provided.

The introduction of performance targets is a third way in which the cost of public services can be reduced. This involves the setting of targets for the performance of public services. These targets are then used to measure the performance of public services and to identify areas for improvement.

There are a number of other ways in which the cost of public services can be reduced. These include the introduction of user charges, the introduction of vouchers, and the introduction of public-private partnerships. Each of these methods has its own advantages and disadvantages, and the choice of method will depend on the specific circumstances of the public service in question.

It is important to note that the reduction of the cost of public services is not the only goal of the public sector. The public sector also has a responsibility to provide high-quality services to the public. Therefore, any initiative to reduce the cost of public services must also take into account the need to maintain the quality of the services provided.

In conclusion, the public sector is facing a number of challenges in the 1990s. One of the main challenges is the need to reduce the cost of public services. This is a difficult task, but there are a number of ways in which it can be achieved. These include the introduction of competition, the restructuring of public services, and the introduction of performance targets.
